“You cannot teach a man anything; you can only help him discover it in himself.” – Galileo

Massey Cancer Center offers mentor opportunities for high school students interested in biomedical research. Students will be paired with an MCC Faculty Member, who will mentor them through project research by gaining lab experience.

All experiences will take place on VCU’s MCV Campus within the Massey Cancer Center. Students must formally apply to this program and positions are offered on a first-come first-serve basis. Selected students will be required to submit further documentation and receive proper vaccines if necessary.

Students will be able to...

- *develop working relationships with community researchers*
- *learn transferrable lab skills for further higher education*
- *collect data for student-led research*

Check out more contacts and details about Massey’s educational opportunities online:
